SLIDESJS

‹ ›

❶ SlidesJS is no longer maintained

As an alternative check out the awesome Slick (http://kenwheeler.github.io/slick/) by Ken Wheeler (http://kenwheeler.github.io/).

☑ Overview

SlidesJS is a responsive slideshow plug-in for jQuery (1.7.1+) with features like touch and CSS3 transitions. Give it a try above and check out the examples to help you get started adding SlidesJS to your project.

↔ Responsive

Create dynamic slideshows that adapt to any screen.

⚡ CSS3 transitions

Animations that run smoothly on modern devices.

📱 Touch

Swipe support that tracks touch movements on supported devices.

🔧 Easy setup

Get going fast with the easy-to-use examples.

🖼 Examples

- Standard slideshow (/examples/standard/)
- Playing and stopping slideshow (/examples/playing/)
- Multiple slideshows (/examples/multiple/)
- Using callbacks (/examples/callbacks/)
- Basic sliding slideshow (unstyled) (/examples/basic/)
- Basic fading slideshow (unstyled) (/examples/basic-fade/)
- More examples coming soon!

These examples are also included in the download (https://github.com/nathansearles/Slides/archive/SlidesJS-3.zip).

📙 Docs

Basic markup

```
<!doctype html>
<head>
  <style>
    /* Prevents slides from flashing */
    #slides {
      display:none;
    }
  </style>

  <script src="http://code.jquery.com/jquery-latest.min.js"></script>
  <script src="jquery.slides.min.js"></script>

  <script>
    $(function(){
      $("#slides").slidesjs({
        width: 940,
        height: 528
      });
    });
  </script>
</head>
<body>
  <div id="slides">
    <img src="http://placehold.it/940x528">
    <img src="http://placehold.it/940x528">
    <img src="http://placehold.it/940x528">
    <img src="http://placehold.it/940x528">
    <img src="http://placehold.it/940x528">
  </div>
</body>
```

Options

width (number) & height (number)

Set width and height of the slideshow. ⊕ Show example

⚠ This must be defined.

start (number)

Set the first slide in the slideshow. ⊕ Show example

✔ Default value is 1.

navigation (object)

Next and previous button settings. ⊕ Show example

---

pagination (object)
Pagination settings ⊕ Show example

---

play (object)
Play and stop button setting. ⊕ Show example

---

effect (object)
Effects setting. ⊕ Show example

---

callback (function)
SlidesJS callbacks. ⊕ Show example

💬 Support

Basic support is available at the SlidesJS forum (http://groups.google.com/group/slidesjs). Many requests are resolved by other SlidesJS users, but assistance is not guaranteed.

❓ Faq

Are there any other effects besides slide or fade?

To keep SlidesJS as simple as possible, it only includes a slide or fade effect. Adding other effects would over complicate and bloat the plugin.

Can I use SlidesJS on a commercial site or include it in a template that I'm selling?

Yes you can, but you must keep the copyright and licensing information with the plugin. If you have additional questions about licensing check out the Apache license (http://www.apache.org/licenses/LICENSE-2.0) which SlidesJS is licensed under.

I can't figure out how to add SlidesJS to my site. Can you help me?

SlidesJS requires some basic understanding of HTML, CSS and jQuery. If you need help with adding SlidesJS to your site please post a question at the SlidesJS forum (http://groups.google.com/group/slidesjs).

Can I uses SlidesJS on my website?

Yes you can, that's what it's for, but you must keep the copyright and licensing information with the plugin.
